- Present value (PV): current worth of future cash flows
- Future value (FV): value of current investments at a future date
- Discount rates: reflecting the risk and opportunity cost

Understanding these concepts allows financial managers to compare investment options accurately

and make decisions aligned with the firm's strategic goals.

### Capital Budgeting Techniques

Investment appraisal methods are central to selecting projects that maximize shareholder value. The book compares and contrasts:

- NPV: The most theoretically sound method, representing the net value added by a project
- IRR: The discount rate that makes NPV zero; useful but with limitations such as multiple IRRs
- Payback period: Simplicity-focused, measuring how quickly an initial investment is recovered
- The importance of considering risk-adjusted discount rates in uncertain environments

### Cost of Capital

Determining the appropriate hurdle rate is critical for investment decisions. The textbook explores:

- Weighted Average Cost of Capital (WACC): combining costs of equity and debt
- The impact of market conditions and company-specific risk
- The effect of capital structure on WACC and overall firm valuation

### Working Capital Optimization

Efficient management of short-term assets and liabilities ensures liquidity and operational smoothness. The book details:

- Techniques for cash flow forecasting

- Credit policies and collection strategies
- The trade-offs between liquidity and profitability
