QuestionAnswer What are the main components of the cell membrane in Ethiopian grade 11 biology? The main components of the cell membrane are phospholipids, proteins, cholesterol, and carbohydrate chains, which work together to regulate the movement of substances in and out of the cell. How does photosynthesis occur in plant cells as explained in Ethiopian grade 11 biology? Photosynthesis occurs in chloroplasts where light energy is converted into chemical energy. It involves the absorption of light by chlorophyll, splitting of water molecules (photolysis), and the synthesis of glucose from carbon dioxide and water. What is the significance of osmosis in plant and animal cells in Ethiopian grade 11 biology? Osmosis is the movement of water from a region of lower solute concentration to higher solute concentration across a semi-permeable membrane. It helps maintain cell turgor in plants and regulates water balance in animal cells. Describe the process of cellular respiration as covered in Ethiopian grade 11 biology. Cellular respiration is a process where glucose is broken down in the presence of oxygen to produce energy in the form of ATP, along with carbon dioxide and water as by-products. It occurs in the mitochondria through glycolysis, the Krebs cycle, and electron transport chain. What are the differences between prokaryotic and eukaryotic cells according to Ethiopian grade 11 biology? Prokaryotic cells lack a nucleus and membrane-bound organelles, are generally smaller, and include bacteria. Eukaryotic cells have a nucleus, membrane-bound organelles, and are found in plants, animals, fungi, and protists.
