The tangent segment measures 10 units, and the secant segment from the external point to the far intersection point measures 18 units. Find the length of the external secant segment from the external point to the nearer intersection point.

Answer:

Using the Tangent-Secant Power Theorem:

If a tangent segment and a secant segment are drawn from a point outside a circle, then:

$$(\text{tangent})^2 = (\text{external secant segment}) \times (\text{whole secant segment})$$

Let x be the length from the external point to the nearer intersection point on the secant.

Then:

$$10^2 = x \times 18$$
