Sample Questions and Explanation

Multiple-Choice Question Example

Question:

A 2.00 L container holds a gas at a pressure of 1.00 atm and a temperature of 300 K. What will be the pressure if the volume is increased to 4.00 L at constant temperature?

- a) 0.50 atm
- b) 1.00 atm
- c) 2.00 atm
- d) 4.00 atm

Answer:

Using Boyle's Law ($P_1V_1 = P_2V_2$):

$$P_2 = P_1 \times V_1 / V_2 = 1.00 \text{ atm} \times 2.00 \text{ L} / 4.00 \text{ L} = 0.50 \text{ atm}$$

Correct answer: a) 0.50 atm

Problem-Solving Question Example

Question:

A sample of gas occupies 10.0 L at 25°C and 1.00 atm pressure. What volume will it occupy at 50°C and 1.00 atm? Assume ideal gas behavior.

Solution:

Use combined gas law: $(P_1V_1)/T_1 = (P_2V_2)/T_2$

Since $P_1 = P_2$, they cancel out: $V_2 = V_1 \times T_2 / T_1$

Convert temperatures to Kelvin:

$$T_1 = 25 + 273 = 298 \text{ K}$$

$$T_2 = 50 + 273 = 323 \text{ K}$$

Calculate V_2 :

$$V_2 = 10.0 \text{ L} \times 323 \text{ K} / 298 \text{ K} \approx 10.8 \text{ L}$$

Answer: Approximately 10.8 L

Recognizing Acids and Bases in Practice

- Acidic solutions typically have a pH less than 7.
- Basic solutions have a pH greater than 7.
- Neutral solutions are exactly at pH 7.

Acid-Base Reactions and Equilibrium

Types of Reactions

- Neutralization: Acid reacts with base to produce salt and water.
- Double displacement: Exchange of ions between acids and bases.
- Titration reactions: Precise measurement of acid or base concentrations.

Key Concepts

- Conjugate acid-base pairs: The acid and base formed after proton transfer.
- Reaction direction: Determined by relative strength of acids and bases.

pH and pOH Calculations

Understanding pH and pOH

- $\text{pH} = -\log[\text{H}^+]$
- $\text{pOH} = -\log[\text{OH}^-]$

pH and pOH are related through the equation:

$$\text{pH} + \text{pOH} = 14 \text{ (at } 25^\circ\text{C)}$$

Calculating pH from Concentration

For strong acids/bases, assume complete dissociation:

- Example: $[\text{H}^+] = 0.01 \text{ M}$? $\text{pH} = 2$

For weak acids/bases, use the K_a or K_b values and set up an equilibrium expression.

Practice Tip:

Be comfortable with logarithmic calculations and using K_a/K_b to find concentrations.

Acid-Base Titrations

Purpose of Titration

- To determine the unknown concentration of an acid or base.
- To find the equivalence point where moles of acid = moles of base.

Key Components

- Indicator: Changes color at a specific pH range.
- Burette: Measures the volume of titrant added.
- Pipette: Measures fixed volume of analyte.

Titration Curve

- The graph of pH versus volume of titrant added shows a sharp change near the equivalence point.
- The pH at the equivalence point varies depending on the strength of the acid/base.

Buffer Solutions

What Are Buffers?

Solutions that resist pH change upon addition of small amounts of acid or base.

How Buffers Work

- Contain a weak acid and its conjugate base (or vice versa).
- They neutralize added H^+ or OH^- ions, maintaining stable pH.

Examples

- Blood plasma (contains carbonic acid/bicarbonate buffer).
- Acidic or basic cleaning solutions.

Buffer Capacity

- Depends on the concentration of the buffer components.
- Higher concentrations provide greater resistance to pH change.

Indicators and Their Role

Common Indicators

Indicator	Color in Acid	Color in Base	pH Range
-----------	---------------	---------------	----------

-----	-----	-----	-----
-------	-------	-------	-------

Litmus	Red	Blue	4.5 ? 8.3
--------	-----	------	-----------

Phenolphthalein	Colorless	Pink	8.3 ? 10.0
-----------------	-----------	------	------------

Methyl Orange	Red	Yellow	3.1 ? 4.4
---------------	-----	--------	-----------

Choosing the Right Indicator

Select based on the pH range near the equivalence point of the titration.

Strategies for Mastery and Test Preparation

Review Key Concepts Regularly

- Understand the definitions thoroughly.
- Memorize properties and common reactions.
- Practice pH calculations, including weak acid/base equilibria.

Practice with Real Problems

Question What are the main concepts covered in Chapter 19 of Prentice Hall Chemistry? Chapter 19 focuses on acids and bases, including their properties, definitions (Arrhenius, Bronsted-Lowry, Lewis), pH calculations, and acid-base reactions. How do you determine the pH of a solution in Chapter 19? The pH is calculated using the formula $\text{pH} = -\log[\text{H}^+]$, where $[\text{H}^+]$ is the concentration of hydrogen ions. The chapter also explains using pH meters and indicators. What is the difference between Arrhenius and Bronsted-Lowry definitions of acids and bases? Arrhenius defines acids as substances that increase H^+ ions in solution and bases as those that increase OH^- ions. Bronsted-Lowry defines acids as proton donors and bases as proton acceptors, broadening the scope beyond aqueous solutions. How do you balance acid-base neutralization reactions as explained in Chapter 19? Balance the chemical equation by ensuring the number of each type of atom is equal on both sides, then adjust coefficients to balance hydrogen and oxygen, considering the formation of water and salt. What are common indicators discussed in Chapter 19 for identifying acid or base solutions? Indicators such as litmus paper, phenolphthalein, and methyl orange are used to identify whether a solution is acidic or basic based on color changes at specific pH levels. How does Chapter 19 explain the concept of pOH and its relation to pH? pOH is calculated as $-\log[\text{OH}^-]$, and $\text{pH} + \text{pOH} = 14$ at 25°C . The chapter discusses how to determine the acidity or basicity of solutions using both pH and pOH values. What are some real-world applications of acid-base chemistry covered in Chapter 19? Applications include maintaining pH in biological

systems, titrations in laboratories, cleaning products, and industrial processes like manufacturing fertilizers and pharmaceuticals. Are there practice problems or exercises available in Prentice Hall Chemistry Chapter 19? Yes, the chapter includes practice problems on calculating pH, pOH, acid-base titrations, and identifying acids and bases, which are useful for reinforcing understanding.
