Question What are the main components of a microwave communication system and their functions? The main components include the transmitter (generates microwave signals), the transmission medium (usually waveguides or antennas), and the receiver (receives and processes signals). The transmitter modulates data onto microwave signals, the transmission medium guides the signals with minimal loss, and the receiver demodulates the signals to retrieve the original data. **Answer** Explain the concept of standing wave ratio (SWR) and its significance in microwave engineering. SWR is the ratio of the maximum to minimum amplitude of a standing wave on a transmission line. It indicates how well the load (antenna) is matched to the transmission line.
